

## Upgrading Skytree

This document describes how to upgrade Skytree from 15.3.x to 15.4.0.

**Note:** It is not possible to upgrade from 15.1.x or 15.2.x directly to 15.4. You must first upgrade to 15.3.x. Refer to the archived PDF documentation available on [support.skytree.net](http://support.skytree.net) for information on upgrading from 15.1.x or 15.2.x to 15.3.x.

1. Stop the service by executing the following command:

```
sudo service skytree-platform stop
```

2. Copy/backup the following property files:

```
/opt/skytree/platform/conf/skytree.properties
/opt/skytree/platform/tomcat/conf/context.xml
/opt/skytree/platform/tomcat/conf/server.xml
/opt/skytree/platform/tomcat/conf/catalina.properties
/opt/skytree/platform/bin/setenv.sh
/opt/skytree/SkytreeServer/config/skytree-yarn.properties
```

3. Uninstall Skytree Platform by executing the following command, replacing "x.x.xxx.xxx" with your current version.

```
sudo rpm -e skytree-platform-15.x.x.xxx.xxx-1.x86_64
```

4. Upgrade Skytree Server

- If the previous installation used the self-extracting shell script, the new installation should do so as well. The new installation can be installed alongside the old version by following the instructions in Self-Extracting Shell Script Installation. Note that the Skytree symbolic link to the installation package, if used, will be updated to point to the new installation.
- In order to upgrade an RPM installation, the existing RPM must first be uninstalled. The new RPM can then be installed using the instructions from the Skytree Installation Guide.

5. Install Skytree Platform. In the example below, replace "X.X.X.X." with the version number from your RPM.

```
sudo rpm --install skytree-platform-X.X.X-X.x86_64.rpm
```

6. Restore/update the properties files that were backed up in Step 2.

7. Install the RPM for updating the database schema on the host where you run MySQL or PostgreSQL.

```
rpm -U SkytreeDb-15.4.0.x86_64.rpm
```

8. Back up your Skytree database.

9. Upgrade the database using the script that was included in the SkytreeDb.rpm (previous step).

### Upgrading the database from 15.3.0 to 15.4.0

### **PostgreSQL**

```
/opt/skytree/dbsetup/Update-15.3.0-15.4-PSQL.sql
```

### **MySQL**

```
/opt/skytree/dbsetup/Update-15.3.0-15.4-MYSQL.sql
```

### **Import the Schema**

You can import the SQL schema into the database using the following example commands:

#### **PostgreSQL**

```
psql skytree < /opt/skytree/dbsetup/Update-15.3.0-15.4-PSQL.sql
```

#### **MySQL**

```
mysql -p < /opt/skytree/dbsetup/Skytree-MYSQL-schema.sql
```

10. Start Skytree Platform:

```
sudo service skytree-platform start
```
